• The seasonally adjusted preliminary estimate of the May value of manufacturers' shipments was $15,333.5 million, 3.2% higher than the revised April estimate of $14,857.6 million. Among the 20 major groups of industries, shipments were higher in 14 and lower in six. Shipments of durable goods industries increased 1.5% to $6,409.5 million from $6,312.2 million in April; all but three industry groups showed increases, with the largest decline in the furniture and fixtures industry (down 2.4%). Shipments of non-durable goods industries were up 4.4% to $8,924.0 million from $8,545.4 million with the major influence on the change being an increase of $210.5 million in the petroleum and coal products industry.

• Après désaisonnalisation, la valeur estimative des livraisons des industries manufacturières en mai 1982, s'est établie à $15,333.5 millions, soit une hausse de 3.2% par rapport au chiffre révisé d'avril ($14,857.6 millions). Des hausses furent notées dans 14 des 20 groupes majeurs des industries manufacturières tandis qu'on observait des baisses dans 6 d'entre eux. Une hausse de 1.5% fût enregistrée dans les livraisons de biens durables, les portant de $6,312.2 millions en avril à $6,409.5 millions en avril. Tous les groupes majeurs de cette catégorie sauf trois ont accusé des hausses. La baisse la plus importante a été enregistrée dans l'industrie du meuble et des articles d'ameublement soit une diminution de 2.4%. Les livraisons de biens non durables ont augmenté de 4.4% passant de $8,545.4 millions à $8,924.0 millions. Cette augmentation est principalement attribuable à une hausse de $210.5 millions dans les industries de fabrication de produits du pétrole et du charbon.

• The preliminary estimate of the backlog of unfilled orders for May, seasonally adjusted, was $17,387.3 million, down 1.8% from the revised value $17,713.3 million a month earlier. Unfilled orders in durable goods industries declined 1.9% to $15,139.0 million, while those in non-durable goods industries were down 1.7% to $2,248.3 million from $2,-286.2 million in April.

• Après désaisonnalisation, la valeur estimative des commades en carnet s'est établie à $17,387.3 millions, soit une baisse de 1.8% par rapport à la valeur révisée du mois précédent qui était de $17,713.3 millions. Les commandes en carnet des industries de biens durables ont diminué de 1.9%, passant à $15,139.0 millions. Une diminution de 1.7% a été enregistrée dans le valeur des commandes en carnet de biens non durables, qui passe de $2,286.2 millions à $2,248.3 millions.

• Inventory owned by manufacturers declined for the second consecutive month and at $33,506.3 million, seasonally adjusted, was at the lowest level since January 1982. The value of raw materials held - estimated at $13,985.6 million - was the lowest since August 1981 and down $286.9 million (2.0%) from April; 15 of the 20 major groups of industries indicated lower values of raw materials on hand. Finished products inventory at $11,517.3 million was down 0.5% from $11,572.0 million (revised); however, this total was still 12.7% higher than the May 1981 figure. Although there was a 1.4% increase in the value of goods in process from April to May, the overall value of total inventory held decreased 0.6% to $35,096.6 million from $35,307.7 million.

• Selon les chiffres préliminaires, la valeur désaisonnalisée des stocks possédés par les manufacturiers est à la baisse pour un deuxième mois consécutif et est à son plus bas niveau depuis janvier, s'établissant ainsi à $33,506.3 millions. La valeur des matières premières détenues est la plus basse depuis août 1981 et s'établie à $13,985.6 millions soit une baisse de $286.9 millions ou 2.0% par rapport au mois précédent. Dans cette categorie, des baisses furent notées dans 15 des groupes majeures. La valeur des produits finis s'est chiffrée a $11,517.3 million ce qui représente une baisse de 0.5% par rapport à la valeur révisée d'avril qui était de $11,572.0 millions, mais une hausse de 12.7% par rapport à la valeur de mai 1981. Malgré l'augmentation de 1.4% dans les produits en cours de transformation, la valeur totale des stocks détenus a diminué de 0.6%, passant de $35,307.7 millions à $35,096.6 millions.

• The seasonally adjusted ratio of total inventory owned to shipments at the end of May was 2.19:1, a significant drop

• Le rapport désaisonnalisé du total des stocks possédés aux livraisons est passé de 2.27:1 en avril à 2.19:1. Le rapport des

from April's revised level of 2.27:1. The ratio of finished products inventory to shipments at the end of May was also down - to 0.75:1 from 0.78:1 in April.

• Not adjusted for seasonal variation, manufacturers' shipments in May 1982 were estimated at $15,546.5 million, 3.4% higher than the revised April 1982 value of $15,037.4 million. Cumulative shipments for the first five months of 1982 were estimated at $75,554.9 million, 1.9% lower than the January-May 1981 level of &77,017.4 million.

produits finis aux livraisons est passé de 0.78:1 en avril à 0.75:1 en mai.

• On a estimé à $15,546.5 millions les livraisons non désaisonnalisées en mai 1982, ce qui représente une hausse de 3.4% par rapport à la valeur révisée d'avril 1982 ($15,037.4 millions). Pour les cinq premiers mois de 1982, les livraisons estimatives ont totalisé $75,554.9 millions contre $77,017.4 millions pour la période correspondante de 1981, soit une baisse de 1.9%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the August 1981 publication are the first to be adjusted to the 1978 census. Values for years prior to and including 1978 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the preliminary census of manufactures totals of shipments for that year. Because the monthly estimates subsequent to 1978 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturer's investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication d'août 1981 sont les premières qui soient ajustées en fonction du recensement de 1978. Les chiffres pour les années jusqu'à 1978 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1978 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 12,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales

Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

Table 3-4

(1) The series for raw materials in the petroleum industries, goods in process in furniture and fixture industries and inventory held but not owned in the transportation and electrical products industries contain no significant seasonality. In the table of seasonally adjusted series, the unadjusted values are repeated. Any small differences between the unadjusted and adjusted values are due to slightly differing rounding techniques. Other data in the table have been seasonally adjusted.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans l'industrie des transports et des produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables aux deux techniques d'arrondissement. On a procédé à la désaisonnalisation des autres chiffres du tableau.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Statistics Canada Statistique Canada

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Un service de communication sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Symbols

The following standard symbols are used in Statistics Canada publications:

. . figures not available.

. . . figures not appropriate or not applicable.

– nil or zero.

- - amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.

. . . n'ayant pas lieu de figurer.

– néant ou zéro.

- - nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTICE TO USERS

Estimates in this publication are subject to revision to accommodate newly-received information. It is advisable always to use data from the most recent issue.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Manufacturers' Shipments, Inventories and Orders, 1978-1982
Les livraisons, les stocks et les commandes des fabricants, 1978-1982

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

JUNE — 1982 — JUIN

- Preliminary estimates show the value of new orders received in Canadian manufacturing industries rose 2.2% in June 1982 to $15,456.5 million, seasonally adjusted from $15,119.2 million (revised) in May, but was still 5.9% below the year-earlier level of $16,430.4 million. In durable goods industries, new orders rose 4.6% to $6,446.1 million from $6,165.5 million, reflecting a large increase in transportation equipment industries and smaller rises in primary metal, metal fabricating and machinery industries; these increases were partly offset by an 11.5% decrease in electrical products industries. New orders in non-durable goods industries at $9,010.4 million were 0.6% higher than the revised May estimate of $8,953.7 million.

- Après désaisonnalisation, la valeur estimative des nouvelles commandes dans l'ensemble des industries manufacturières en juin 1982 s'est établie à $15,456.5 millions, soit une hausse de 2.2% par rapport à la valeur révisée de mai ($15,119.2 millions) mais une baisse de 5.9% par rapport à la valeur de juin 1981 ($16,430.4 millions). Dans les industries de biens durables, la valeur estimative de $6,446.1 millions était supérieure de 4.6% à la valeur révisée d'avril ($6,165.5 millions), reflétant ainsi une forte augmentation dans les industries de fabrication d'équipement de transport et des progressions moins importantes dans les industries de la première transformation des métaux, de la fabrication de produits en métal et de la fabrication de machines. Cependant, ces hausses ont été compensées par une diminution de 11.5% dans les nouvelles commandes des produits électriques. Les nouvelles commandes des biens non durables ont atteint $9,010.4 millions, ce qui représente une hausse de 0.6% par rapport à la valeur révisée de mai qui était de $8,953.7 millions.

- The seasonally adjusted preliminary estimate of the value of manufacturers' shipments in June was $15,506.9 million, up 1.0% from $15,356.1 million (revised) in May. Among the 20 major groups of industries, shipments were higher in seven, lower in 11 and little changed in two. Shipments of durable goods industries increased 2.3% to $6,495.0 million from $6,351.2 million in May with the transportation equipment industries group-where the value of motor vehicles shipped was up sharplyshowing a 6.2% increase. Shipments of non-durable goods industries rose 0.1% to $9,011.9 million from $9,004.9 million.

- En juin 1982, la valeur estimative des livraisons des industries manufacturières, après désaisonnalisation, s'est établie à $15,506.9 millions, soit une hausse de 1.0% par rapport au chiffre révisé de mai ($15,356.1 millions). Des hausses ont été notées dans sept des groupes majeurs des industries manufacturières, des baisses dans 11, et aucun changement dans deux, soit les industries des aliments et boissons et de la fabrication de produits du pétrole et du charbon. Une hausse de 2.3% a été enregistrée dans les livraisons des biens durables, ce qui les fait passer de $6,351.2 millions en mai à $6,495.0 millions en juin. Puisque la valeur des livraisons des véhicules automobiles a considérablement augmenté, le total des industries de la fabrication d'équipement de transport a augmenté de 6.2%. Les livraisons des biens non durables ont augmenté de 0.1%, passant de $9,004.9 millions à $9,001.9 millions.

- The preliminary estimate of the backlog of unfilled orders for June was $17,426.0 million, seasonally adjusted, down 0.3% from the revised value of $17,476.4 million a month earlier. Unfilled orders in durable goods industries declined 0.3% to $15,192.5 million, and those in non-durable goods industries were down 0.1% to $2,233.5 million.

- Après désaisonnalisation, la valeur estimative des commandes en carnet s'est établie à $17,426.0 millions, en baisse de 0.3% par rapport à la valeur révisée du mois précédent qui était de $17,476.4 millions. Les commandes en carnet des industries des biens durables ont diminué de 0.3% pour totaliser $15,192.5 millions. Une diminution de 0.1% a été enregistrée dans la valeur des commandes en carnet des biens non durables, qui passe de $2,235.0 millions à $2,233.5 millions.

- Despite a small accumulation in finished products on hand, declining levels of raw materials and goods in process lowered the seasonally adjusted estimate of manufacturers' inventories owned 0.4% to $33,323.5 million in June from $33,457.1 million in May. This marked the third consecutive month in which inventories have declined, and they were at their lowest level since November 1981. The raw materials value of $13,942.3 million was down $50.8 million (0.4%) from May and goods in process at $9,423.0 million were off $115.5 million (1.2%) on the month; finished products were up $34.5 million (0.3%) to $11,553.1 million. Among the 20 major groups, total inventory owned was lower in 14, and higher in six. The overall value of total inventory held also declined 0.4% to $34,918.4 million at June 30.

- En dépit d'une légère augmentation des produits finis, d'une baisse des niveaux des matières premières et des produits en cours, les stocks possédés ont baissé de 0.4% pour atteindre $33,323.5 millions en juin en regard de $33,457.1 millions en mai. Les inventaires sont à la baisse pour le troisième mois consécutif et sont à leur plus bas niveau depuis novembre 1981. La valeur des matières premières s'est établie à $13,942.3 millions, soit une baisse de $50.8 millions ou 0.4% par rapport au mois précédent et les biens en cours de transformation ont baissé de $115.5 millions (- 1.2%), atteignant ainsi $9,423.0 millions. Les produits finis ont augmenté de $34.5 millions (+ 0.3%), pour se chiffrer à $11,553.1 millions. Dans cette catégorie, des baisses ont été notées dans 14 des groupes majeurs, et des hausses dans six. La valeur des stocks détenus a aussi diminué de 0.4%, s'établissant à $34,918.4 millions.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of June was 2.15:1, down from 2.18:1 (revised) in May; the June level was significantly lower than the peak 2.27:1 reached in April 1982 and was the lowest point for this ratio since November 1981, when it stood at 2.13:1. The ratio of finished products inventory to shipments at 0.75:1 was unchanged from May.

- Not adjusted for seasonal variation, manufacturers' shipments in June 1982 were estimated at $16,689.4 million, 7.2% higher than the revised May 1982 value of $15,568.8 million. Cumulative shipments for the first six months of 1982 were estimated at $92,266.5 million, down 2.4% from the corresponding 1981 estimate of $94,530.0 million.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons est passé de 2.18:1 en mai à 2.15:1 en juin. Ce rapport est inférieur à celui d'avril qui était de 2.27:1 et est le plus bas à être observé depuis novembre 1981. Le rapport des produits finis aux livraisons est le même que celui de mai (0.75:1), inférieur à celui d'avril (0.78:1) mais supérieur de 0.01 point à celui de février et mars de cette année.

- On a estimé à $16,689.4 millions les livraisons non désaisonnalisées en juin 1982, ce qui représente une hausse de 7.2% par rapport à la valeur révisée de mai 1982 ($15,568.8 millions). Pour les six premiers mois de 1982, les livraisons estimatives ont totalisé $92,266.5 millions contre $94,530.9 millions pour la période correspondante de 1981, soit une baisse de 2.4%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the August 1981 publication are the first to be adjusted to the 1978 census. Values for years prior to and including 1978 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the preliminary census of manufactures totals of shipments for that year. Because the monthly estimates subsequent to 1978 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturer's investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication d'août 1981 sont les premières qui soient ajustées en fonction du recensement de 1978. Les chiffres pour les années jusqu'à 1978 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1978 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

Table 3-4

(1) The series for raw materials in the petroleum industries, goods in process in furniture and fixture industries and inventory held but not owned in the transportation and electrical products industries contain no significant seasonality. In the table of seasonally adjusted series, the unadjusted values are repeated. Any small differences between the unadjusted and adjusted values are due to slightly differing rounding techniques. Other data in the table have been seasonally adjusted.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans l'industrie des transports et des produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables aux deux techniques d'arrondissement. On a procédé à la désaisonnalisation des autres chiffres du tableau.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

. . figures not available.
. . . figures not appropriate or not applicable.
— nil or zero.
- - amount too small to be expressed.
p preliminary figures.
r revised figures.
x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.
. . . n'ayant pas lieu de figurer.
— néant ou zéro.
- - nombres infimes.
p nombres provisoires.
r nombres rectifiés.
x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTICE TO USERS

Estimates in this publication are subject to revision to accommodate newly-received information. It is advisable always to use data from the most recent issue.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

JULY — 1982 — JUILLET

- Preliminary estimates show the value of new orders received in Canadian manufacturing industries fell 1.1% in July 1982 to $15,252.1 million, seasonally adjusted from $15,423.4 million (revised) in June, and was 9.4% below the year-earlier level of $16,837.6 million. In durable goods industries, new orders dropped 3.0% to $6,260.9 million from $6,452.8 million, reflecting a large decrease in primary metals industries and smaller decreases in machinery and transportation equipment industries; partly offsetting were increases of 6.0% for metal fabricating and 4.2% for electrical products industries. New orders in non-durable goods industries at $8,991.2 million were up 0.2% from $8,970.6 million (revised) in June.

- Après désaisonnalisation, la valeur estimative des nouvelles commandes dans l'ensemble des industries manufacturières en juillet 1982 s'est établie à $15,252.1 millions, soit une baisse de 1.1% par rapport à la valeur révisée de juin ($15,423.4 millions) mais une baisse de 9.4% par rapport à la valeur de juillet 1981 ($16,837.6 millions). Dans les industries de biens durables, la valeur estimative de $6,260.9 millions était inférieure de 3.0% à la valeur révisée de juin de $6,452.8 millions, reflétant ainsi une grande diminution dans les industries de première transformation des métaux et de plus petites diminutions dans l'industrie de fabrication de machines et de fabrication d'équipement de transport. Cependant, ces baisses ont été compensées par des augmentations de 6.0% dans les industries de fabrication de produits en métal et de 4.2% dans celles des produits électriques. Les nouvelles commandes des biens non durables ont atteint $8,991.2 millions, ce qui représente une hausse de 0.2% par rapport à la valeur révisée de juin qui était de $8,970.6 millions.

- The seasonally adjusted preliminary estimate of the value of manufacturers' shipments in July was $15,225.1 million, 1.3% lower than the revised June estimate of $15,429.1 million. Among the 20 major groups of industries, shipments were lower in eleven, higher in eight and unchanged in one group. Shipments of durable goods industries fell 3.5% to $6,222.1 million from $6,449.7 million in June; all industry groups except furniture and fixtures showed declines, losses ranging from 5.4% in metal fabricating to 0.5% in electrical products. Shipments of non-durable goods industries were up 0.3% to $9,003.0 million from $8,979.4 million.

- En juillet 1982, la valeur estimative des livraisons des industries manufacturières, après désaisonnalisation, s'est établie à $15,225.1 millions, soit une baisse de 1.3% par rapport au chiffre révisé de juin de $15,429.1 millions. Des baisses ont été notées dans onze des vingt groupes majeurs des industries manufacturières alors qu'on a enregistré des hausses dans huit d'entre eux et aucun changement dans l'industrie du meuble et des articles d'ameublement. Une baisse de 3.5% a été enregistrée dans les livraisons des biens durables, ce qui les fait passer de $6,449.7 millions en juin à $6,222.1 millions en juillet. Tous les groupes d'industries classifiés sous les industries des biens durables ont accusé des baisses à l'exception de l'industrie du meuble et des articles d'ameublement. Les baisses varient de 5.4% pour l'industrie de fabrication de produits en métal à 0.5% pour l'industrie des produits électriques. Les livraisons des biens non durables ont augmenté de 0.3% passant de $8,979.4 millions à $9,003.0 millions.

- The backlog of unfilled orders for July 1982 was $17,497.7 million, seasonally adjusted, 0.2% higher than the revised value of $17,470.7 million a month earlier. Unfilled orders in durable goods industries rose 0.3% to $15,283.3 million, and those in non-durable goods industries were down 0.5% to $2,214.4 million from $2,226.2 million in June.

- Après désaisonnalisation, la valeur estimative des commandes en carnet s'est établie à $17,497.7 millions, une hausse de 0.2% par rapport à la valeur révisée du mois précédent qui était de $17,470.7 millions. Les commandes en carnet des industries des biens durables ont augmenté de 0.3% pour totaliser $15,283.3 millions. Une diminution de 0.5% a été enregistrée dans la valeur des commandes en carnet des biens non durables, qui passe de $2,226.2 millions à $2,214.4 millions en juin.

- Although seasonally adjusted values of total inventory owned declined in 12 of the 20 major industry groups in July, the all-industry total was slightly higher for the first time since March. The turnaround in the trend was caused by the unseasonably high levels of goods in process and finished products inventories of motor vehicle manufacturers. For all manufacturing, raw materials, valued at $13,765.3 million, were down $186.6 million (1.4%); but goods in process, valued at $9,641.8 million, were up $227.8 million (2.4%) and finished products increased $58.6 million (0.5%) to $11,575.4 million.

- Même si la valeur désaisonnalisée des stocks possédés par les manufacturiers était à la baisse dans douze des vingt groupes majeurs, le total augmentait pour la première fois depuis mars. Ce revirement dans la tendance a été causé par des taux élevés non désaisonnalisés dans le niveau des produits en cours et des produits finis des fabricants de véhicules automobiles. Pour toutes les industries manufacturières, les matières se sont établies à $13,765.3 millions, une baisse de $186.6 millions ou 1.4%; les produits en cours ont augmenté de $227.8 millions (2.4%) à $9,641.8 millions et les produits finis ont augmenté de $58.6 millions (0.5%) à $11,575.4 millions.

- The seasonally adjusted ratio of inventory owned to shipments in July was 2.19:1, up from 2.16:1 (revised) in June, reflecting slightly higher total inventories owned and

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons en juillet, reflétant la légère augmentation dans le total des inventaires possédés et la baisse dans la valeur des

the decline in the value of shipments. Although the ratio has changed direction after two months of decline, it remains significantly below the April level of 2.27:1. The ratio of finished products inventories to shipments was 0.76:1 in July compared with a revised 0.75:1 in June.

- Not adjusted for seasonal variation, manufacturers' shipments in July 1982 were estimated at $14,025.7 million, down 15.5% from the revised June 1982 value of $16,-604.5 million. Cumulative shipments for the first seven months of 1982 were estimated at $106,207.3 million, showed a decrease of 3.4% from the January-July 1981 level of $109,896.4 million.

livraisons, s'est établi à 2.19:1 en juillet, une hausse par rapport à celui de juin qui était de 2.16:1. Ce rapport a changé de direction après deux mois à la baisse mais il est resté plus bas que celui d'avril (2.27:1). Le rapport des produits finis aux livraisons est passé de 0.75:1 en juin, à 0.76:1 en juillet.

- On a estimé à $14,025.7 millions les livraisons non désaisonnalisées en juillet 1982, ce qui représente une baisse de 15.5% par rapport à la valeur révisée de juin ($16,604.5 millions). Pour les sept premiers mois de 1982, les livraisons estimatives ont totalisé $106,207.3 millions contre $109,896.4 millions pour la période correspondante de 1981, soit une baisse de 3.4%.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the August 1981 publication are the first to be adjusted to the 1978 census. Values for years prior to and including 1978 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. In addition, the calendar year totals of shipments values have been summarily adjusted to conform with the preliminary census of manufactures totals of shipments for that year. Because the monthly estimates subsequent to 1978 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturer's investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication d'août 1981 sont les premières qui soient ajustées en fonction du recensement de 1978. Les chiffres pour les années jusqu'à 1978 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1978 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leur matières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir renvois pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de ''Cansim'' pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

FOOTNOTES

Table 1

(1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

Table 3-4

(1) The series for raw materials in the petroleum industries, goods in process in furniture and fixture industries and inventory held but not owned in the transportation and electrical products industries contain no significant seasonality. In the table of seasonally adjusted series, the unadjusted values are repeated. Any small differences between the unadjusted and adjusted values are due to slightly differing rounding techniques. Other data in the table have been seasonally adjusted.

Note: Figures may not add due to rounding.

RENVOIS

Tableau 1

(1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans l'industrie des transports et des produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables aux deux techniques d'arrondissement. On a procédé à la désaisonnalisation des autres chiffres du tableau.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

Statistics Canada Statistique Canada

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0V6 (Telephone: 996-7008) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montréal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0V6 (téléphone: 996-7008) ou au centre de consultation de Statistique Canada à:

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

. . figures not available.
. . figures not appropriate or not applicable.
— nil or zero.
- - amount too small to be expressed.
p preliminary figures.
r revised figures.
x confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

. . nombres indisponibles.
. . . n'ayant pas lieu de figurer.
— néant ou zéro.
- - nombres infimes.
p nombres provisoires.
r nombres rectifiés.
x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTICE TO USERS

Estimates in this publication are subject to revision to accommodate newly-received information. It is advisable always to use data from the most recent issue.

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Manufacturers' Shipments, Inventories and Orders, 1978-1982

Les livraisons, les stocks et les commandes des fabricants, 1978-1982

(Seasonally Adjusted — Chiffres désaisonnalisés)

HIGHLIGHTS

POINTS SAILLANTS

AUGUST — 1982 — AOÛt

- Preliminary estimates show the value of new orders received in Canadian manufacturing industries rose 4.5% in August 1982 to $15,633.7 million, seasonally adjusted, from $14,960.3 million (revised) in July, although the total was still 0.4% below the August 1981 level of $15,696.5 million. In durable goods industries, new orders advanced 8.8% to $6,509.7 million from $5,981.5 million, reflecting large increases in the primary metals, machinery and transportation equipment industries; decreases of 3.1% and 13.3% were posted in the metal fabricating and electrical products industries. New orders in non-durable goods industries at $9,124.0 million were 1.6% higher than the revised July estimate of $8,978.8 million.

- Après désaisonnalisation, la valeur estimative des nouvelles commandes dans l'ensemble des industries manufacturières en août 1982 s'est établie à $15,633.7 millions, soit une hausse de 4.5% par rapport à la valeur révisée de juillet ($14,960.3 millions) mais une baisse de 0.4% par rapport à la valeur d'août 1981 ($15,696.5 millions). Dans les industries de biens durables, la valeur estimative de $6,509.7 millions était supérieure de 8.8% à la valeur révisée de juillet de $5,981.5 millions, reflétant ainsi une grande augmentation dans les industries de première transformation des métaux, dans l'industrie de fabrication de machines et de fabrication d'equipement de transport. Des diminutions de 3.1% et 13.3% furent enregistrées dans les industries de fabrication de produits en métal et de fabrication des produits électriques. Les nouvelles commandes des biens non durables ont atteint $9,124.0 millions, ce qui représente une hausse de 1.6% par rapport à la valeur révisée de juillet qui était de $8,978.8 millions.

- The seasonally adjusted preliminary estimate of the value of manufacturers' shipments in August was $16,100.4 million, up 6.4% from $15,126.1 million (revised) in July. Among the 20 major groups of industries, shipments were higher in 15 and lower in five; a $615.2 million (30.2%) increase in transportation equipment industries was a reflection of sharply higher shipments of automobile products industries. Shipments of durable goods industries increased 13.3% to $6,946.0 million from $6,133.0 million in July; all industry groups except wood and electrical products showed increases, ranging from 30.2% in transportation equipment to 2.7% in furniture and fixtures. Shipments of non-durable goods industries were up 1.8% to $9,154.4 million from $8,993.1 million.

- En août 1982, la valeur estimative des livraisons des industries manufacturières, après désaisonnalisation, s'est établie à $16,100.4 millions, soit une hausse de 6.4% par rapport au chiffre révisé de juillet de $15,126.1 millions. Des hausses ont été notées dans 15 des groupes majeurs des industries manufacturières, des baisses dans cinq. Une augmentation de 30.2% ($615.2 millions) dans les industries de fabrication d'équipement de transport a été le reflet d'une grosse augmentation dans les livraisons des produits automobiles. Une hausse de 13.3% a été enregistrée dans les biens durables qui sont passés de $6,133.0 millions en juillet à $6,946.0 millions. Tous les groupes des industries classifiées sous les industries des biens durables à l'exception de l'industries du bois et produits électriques ont eu des augmentations variant de 30.2% dans l'industrie d'équipment de transport à 2.7% dans l'industrie du meuble et des articles d'ameublement. Les livraisons des biens non durables ont augmenté de 1.8% passant de $8,993.1 millions à $9,154.4 millions.

- The backlog of unfilled orders for August 1982 was $16,838.2 million, seasonally adjusted, 2.7% lower than the revised value of $17,304.9 million a month earlier. Unfilled orders in durable goods industries dropped 2.9% to $14,656.7 million from $15,093.0 million, and those in non-durable goods industries decreased 1.4% to $2,-181.5 million from $2,211.9 million in July.

- Après désaisonnalisation, la valeur estimative des commandes en carnet s'est établie à $16,838.2 millions, une baisse de 2.7% par rapport à la valeur révisée du mois précédent qui était de $17,304.9 millions. Les commandes en carnet des industries des biens durables ont diminue de 2.9% passant de $15,093.0 millions à $14,656.7 millions. Une diminution de 1.4% a été enregistrée dans la valeur des commandes en carnet des biens non durables qui passe de $2,211.9 millions on juillet à $2,181.5 millions.

- The seasonally adjusted value of total inventory owned declined in 14 of the 20 major groups of industries in August. The all-industry total of $32,944.1 million was the lowest level reached since September 1981 when it was valued at $32,809.9 million. Total inventory held was down to $34,485.9 million from $34,919.0 million (revised) in July. All categories of inventory fell in August with raw materials down 1.9%, goods in process 1.4% and finished products 0.4%.

- La valeur désaisonnalisée des stocks possédés était à la baisse dans 14 des 20 groupes majeurs. La valeur totale des stocks dans toutes les industries manufacturières s'est chiffrée à $32,944.1 millions, le niveau le plus bas enregistré depuis septembre 1981, alors qu'elle était de $32,809.9 millions. Le total des stocks detenus est passé de $34,919.0 millions à $34,485.9 millions avec des baisses au chapitre des matières premières (1.9%), des produits en cours de transformation (1.4%) et des produits finis (0.4%).

- Reflecting the lower value of inventories owned and the sharp increase in the value of shipments, the seasonally adjusted ratio of inventory owned to shipments dropped sharply in August to 2.05:1 from the revised level of 2.20:1 in July and was the lowest ratio since the 2.04:2 of

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons en juillet, reflétant la baisse dans le total des inventaires possédés et la hausse dans la valeur des livraisons s'est établi à 2.05:1 en août, une baisse par rapport à celui de juillet qui était de 2.20:1. Ce rapport fut le plus bas enregistré

August 1981. The ratio of finished products inventories to shipments was 0.72:1 in August compared with a revised 0.76:1 in July; it was the first time this ratio had dropped below 0.74:1 since November 1981 when it stood at 0.71:1.

- Not adjusted for seasonal variation, manufacturers' shipments in August 1982 were estimated at $14,828.7 million, 6.4% higher than the revised July 1982 value of $13,943.0 million. Cumulative shipments for the first eight months of 1982 at $120,953.4 million were down 2.8% from the January-August 1981 level of $124,466.7 million.

depuis août 1981 alors qu'il était de 2.04:1. Le rapport des produits finis aux livraisons est passé de 0.76:1 en juillet à 0.72:1 en août. C'est la première fois qu ce rapport est sous 0.74:1 depuis novembre 1981 alors qu'il était de 0.71:1.

- On a estimé à $14,828.7 millions les livraisons non désaisonnalisées en août 1982, ce qui représente une hausse de 6.4% par rapport à la valeur révisée de juillet ($13,943.0 millions). Pour les huit premiers mois de 1982, les livraisons estimatives ont totalisé $120,953.4 millions contre $124,466.7 millions pour la période correspondante de 1981, soit une baisse de 2.8%.
